

First Baptist Church of Woodbridge Sanitizing Solutions To Clean Before and After Each Worship Service

Disinfection is a two-step process – clean first then disinfect. You have to clean first because something as minor as the oil from a persons skin can prevent a disinfectant from working.

We use two ENVIROX (company name at <https://www.enviroxclean.com/>) solutions:

- **H2O2** (a hydrogen peroxide and orange oil mix) at “red button” strength to clean. Although this is a cleaner, it kills about 99.9% of germs/bacteria/viruses you are likely to encounter – but not human corona-virus). It is safe for pretty much any surface. We apply this with micro-fiber cloths.
- **CRITICAL CARE** (a hospital grade disinfectant that kills virtually everything and specifically human corona-virus). We apply this with an electrostatic sprayer (a Victory 417 backpack model for now.)

In the future we will be receiving a larger sized/more capable cart-mounted electrostatic sprayer – the Clorox Total System 360, which uses specific Clorox disinfectant solutions that I don’t have at my fingertips right now.

If anyone needs our supplier (I think you have to buy ENVIROX products through a distributor) we use:
